Umbraco

Version Control & Collaboration
Git, GitHub, GitLab, CI/CD workflows, Agile methodology

PERSONAL STATEMENT

As a Senior Front-End Developer with nearly 11 years of experience, I specialise in building scalable, accessible, and user-centric web applications. I have a proven track record of leading high-profile projects within the NHS, delivering design systems and UI libraries that enhance healthcare experiences. Currently lead front-end developer working on a Digital Front Door for patients, integrating the Scottish Government Design System and contributing to improving access to patient data in a secure, intuitive way.

My passion for clean, reusable code and my commitment to continuous learning, including React, design systems, and front-end architecture, drive me to deliver quality products that solve real user problems.

EXPERIENCE

Senior UI Developer
2018 – Present | NHS Education for Scotland

- Lead Front-End Developer for the Digital Front Door web app, integrating the Scottish Government Design System to provide patients with access to GP notes, appointments, and messages through a unified interface.

- Architected and developed custom components in React and HTML/SCSS to extend and adapt the design system for specific use cases.

- Collaborated with UX, back-end, and product teams to ensure the platform meets both user needs and accessibility standards (WCAG).

- Led the development of an internal Design System used by multiple NHS boards to ensure consistency and accessibility in national healthcare applications.

- Created .NET Core Tag Helpers to simplify front-end integration, improve performance, and ensure reusability across projects.

UI Designer / Developer
2015 – 2018 | NHS Education for Scotland

- Designed and implemented the first UI style guide for NHS Scotland, ensuring consistency across all internal websites and applications.

- Developed accessible, mobile-first websites using HTML, CSS, and JavaScript.

- Collaborated closely with back-end teams to ensure a smooth integration of front-end and back-end solutions, using C# and .NET technologies.

- Ensured the front-end of corporate applications adhered to the highest accessibility standards and provided a user-friendly experience.
